The following is a very basic decision tree to help you assess when to call FWC Law Enforcement for work near a nest:

Is the activity or work occurring within 330 feet of a nest during the nesting season, generally Oct-May, when eagles are actively attempting to nest or have young in the nest?

If Yes, are the eagles visibly disturbed or staying away from their nest because of the activity? Or is there any danger to the nest itself?

If No, continue to monitor for disturbance behavior from the eagles. Unless the eagles are acting disturbed by the work, or are not returning to their nest because of the work, or the nest has been removed, no "disturbance" or "take" has occurred.

If Yes, call the FWC Hotline to report the disturbance: 888-404-3922. An officer will investigate if a permit has been issued for the activity and if the work needs to be halted.

If No, is the work or activity endangering the nest?

If Yes, call the FWC Hotline: 888-404-3922. The nest is protected even when not being used and cannot be removed or destroyed without a permit.

If No, no further action is required.
